## **NEW AND REVISED COURSES OF STUDY**

### **Industrial Arts**

#### **BITA I & II (ROP) Carpentry/Construction Occupations**

Students learn design skills and residential construction techniques through development of floor plans, foundation plans, elevations, sections, details, and building scale models.

#### **Advanced Robotics**

The objective of this course is to use a hands-on approach to introduce the basic concepts in robotics, focusing on micro controllers, autonomous mobile robots and real world applications. Information presented in class will be linked to lab experiments. Students will work in teams to build and test increasingly more complex LEGO-based mobile robots. Students will apply what they have learned through a series of robot contests. Students will explore materials in greater depth than Robotics I.

The course will use Parallax stamp micro controllers, Lego systems, MIT Handyboard and VEX Robotics to illustrate the historical development of robotics, integrating sensors, electric circuits, gears and motors. More importantly, students will use knowledge learned in their core classes to problem solve. Students will use writing skills to communicate with the robots, math analysis to control movement, and their science background to design and measure variables such as acceleration and torque.
